XYC-3 Truck-mounted Hydraulic CDR

Алматы, Казахстан

1、Introduction to XYC-3 Truck-mounted Hydraulic Core Drilling Rig
XYC-3 vehicle mounted hydraulic core drilling rig is a multi-functional hydraulic vehicle-mounted vertical shaft rotary drilling rig, which is mainly used in geological census exploration, road and high-rise building foundation exploration, as well as various concrete structure inspection holes, river embankments, roadbed grouting hole drilling and direct grouting holes, civil wells, etc.
2、Features of XYC-3 Truck-mounted Hydraulic Core Drilling Rig
2.1 The truck chassis is a medium truck chassis. The rig transmission system, winch, mud pump and other important accessories are installed on the chassis. The layout is reasonable and compact, and the operation is simple.
2.2 BW-250 mud pump is equipped with high pressure and large flow to ensure the drilling depth and diameter.
2.3 The drilling rig is equipped with a mobile device, which can realize the forward and backward movement of the drilling rig host and facilitate wellhead operation.
2.4 The rig tower is equipped with hydraulic automatic telescopic drilling tower, which is safe and convenient to operate.
2.5 The hydraulic system realizes the control of feed pressure and speed to meet the needs of drilling in different strata.
