XYX-3 Wheel Hydraulic CDR

Алматы, Казахстан

1、Introduction to XYX-3 Wheel Hydraulic Core Drilling Rig
XYX-3 wheeled hydraulic core drilling rig is a multi-functional traction hydraulic vertical rotary drilling rig. It is mainly used for the general survey and exploration of metal and non-metallic solid minerals, and also can be used for engineering geological exploration, hydrogeological survey, general survey and exploration of oil and gas fields, and well drilling.
2、Features of XYX-3 Wheel Hydraulic Core Drilling Rig
2.1 The drilling rig is equipped with a wheeled traveling mechanism and hydraulic cylinder support which is convenient for moving the whole machine and horizontal adjustment of the drilling rig.
2.2 With oil pressure feed mechanism, the drilling efficiency is improved.
2.3 The drilling rig is equipped with a hydraulic chuck, which can reverse the rod without stopping the machine, with high working efficiency, convenient, safe and feasible operation.
2.4 It is equipped with a pressure gauge at the bottom of the hole to indicate the pressure, so as to grasp the situation in the hole.
2.5 The tower lifting and lowering are operated by hydraulic pressure, which is convenient and feasible.
2.6 The diesel engine is electrically started to reduce the labor intensity of workers.
