1.Introduction to KY Series Metal Mine Prospecting Drilling Rig
KY series fully hydraulic exploration drilling rig is a kind of exploration equipment used in mine tunnel or surface, which has been widely used in the field of metal mines. When the drill is used in the tunnel, it can be drilled 0-360 degrees on the column and 0-90 degrees on the surface drilling frame.
2.Features of KY Series Metal Mine Prospecting Drilling Rig
2.1 The drilling rig is composed of the main engine, pump station and operation platform, with flexible layout.
2.2 Small size, light weight and convenient installation.
2.3 Good decomposition and convenient transportation.
2.4 It can be put into production in the original tunnel, which plays a protective role in the overall structure of the mine.
2.5 Adopt light feeding frame, clamp, power head rotary drilling, oil cylinder pulling and sending drilling tools, which can save heavy derrick.
2.6 Mechanical principle twist and unload drill pipe, reduce labor intensity of workers and improve work efficiency.
2.7 It has the function of linkage. It can be operated in a centralized way through the control console. It is simple and safe, and it can adjust speed infinitely.
2.8 The Φ 33 and Φ 43 drill pipes can be used in the same machine, and the replacement is con.
