GFDD Series Photovoltaic Ground Nail Drilling Rig

Алматы, Казахстан

1. Introduction to GFDD Series Photovoltaic Ground Nail Drilling Rig
The GFDD series photovoltaic ground nail drill is a mechanical equipment specially used for ground nail installation and drilling operations in the construction of photovoltaic power stations. It adopts a crawler design and can move flexibly on various terrains. It is particularly suitable for construction in complex terrains such as mountains and slopes.
2. Features of GFDD Series Photovoltaic Ground Nail Drilling Rig
2.1 Equipped with a powerful power system and efficient hydraulic transmission device, it can quickly and accurately drive the ground nails into the ground, significantly improving construction efficiency.
2.2 Equipped with hydraulic radiator to ensure the drilling rig can work safely for a long time.
2.3 Equipped with crawler walking chassis, no manual movement is required, making the machine more convenient to move.
2.4 The drilling rig is propelled and lifted by hydraulic cylinders, which makes the work more efficient.
2.5 The operation is simple and centrally controlled through the operating console, making it convenient for users to control and adjust.
