

DZL Series Small Four-Wheel Guardrail Pile Driver+

Алматы, Казахстан

1.Introduction to DZL Series Small Four-Wheel Guardrail Pile Driver

The DZL series small four-wheel guardrail pile driver is a multi-functional engineering machinery specially designed for highway guardrail construction. Powered by a diesel engine and adopting a full hydraulic transmission system, it features self-propelled capability without the need for external traction. Its core functions include steel pipe pile driving, extraction, and drilling, enabling it to complete guardrail installation and emergency repair operations in various complex stratum conditions. It fully embodies advantages such as convenient mobility and diversified functions, and is widely used in expressways, municipal engineering, and field construction sites.

2.Features of DZL Series Small Four-Wheel Guardrail Pile Driver

2.1 Power configuration: Equipped with a high-performance diesel engine, it provides a strong power source for construction operations, with significantly improved power reliability and fuel economy.

2.2 Hydraulic system: Advanced hydraulic system with high-quality hydraulic components and strict assembly processes ensures high efficiency and durability of the hydraulic system.

2.3 Design: The overall frame structure is sophisticated with qualified materials, featuring high strength and good stability. The design conforms to industrial aesthetics, and the operator's working space is more spacious.

2.4 Production process: The production process is more reasonable. Wear-resistant components are all treated with heat treatment. The welding process is rigorous, and after stress relief treatment, it is not easy to deform.
