ZLJ Series Grouting Reinforcement Drilling Rig+

Алматы, Казахстан

1.Introduction to ZLJ Series Grouting Reinforcement Drilling Rig
The grouting reinforcement drilling rig is a type of engineering machinery specifically designed for drilling and grouting reinforcement operations. It integrates two core functions: drilling and grouting, and is widely used in engineering fields such as tunnels, mines, water conservancy and hydropower, subways, foundation pit support, foundation treatment, slope management, and disaster prevention. It is an indispensable key equipment in modern geotechnical engineering and geological disaster control.
2.Features of ZLJ Series Grouting Reinforcement Drilling Rig
2.1 The drilling rig integrates drilling and grouting functions, eliminating the need to replace other equipment and improving construction efficiency.
2.2 The overall design of the drilling rig is compact, making it convenient for construction in narrow spaces.
2.3 The drilling angle can be adjusted by rotating the vertical shaft to meet the needs of multi-angle grouting.
2.4 Optional rubber steel wire crawler chassis or electric three-wheeled vehicle chassis, which is convenient for moving and does not damage the road surface.
3.Parameters of ZLJ Series Grouting Reinforcement Drilling Rig
